

Step 1: START

Step 2: INPUT base (as floating-point number)

Step 3: INPUT height (as floating-point number)

Step 4: CALCULATE  $\text{area} = 0.5 \times \text{base} \times \text{height}$

Step 5: OUTPUT area formatted to 2 decimal places

Step 6: STOP

## 1.1.4. Area of Triangle

00:25

Write a Python program that prompts the user to enter the triangle's base and height and computes the triangle's area.

Formula:  $\text{Area of Triangle} = 0.5 \times \text{base} \times \text{height}$ .

**Input Format:**

- The first line of input is the float value that represents the base of the triangle.
- The second line of input is the float value that represents the height of the triangle.

**Output Format:**

- The output is the floating point value that represents the area of a triangle, formatted to two decimals.

Sample Test Cases

+

triangleA...

Submit

```
1 h=float(input())
2 b=float(input())
3 a=0.5*b*h
4 print(f'{a:.2f}')
```
