

10.1.1 Remove Punctuations from the String

Algorithm

Step 1: Start

Step 2: Input string `inp`

Step 3: Initialize `new_str = ""`

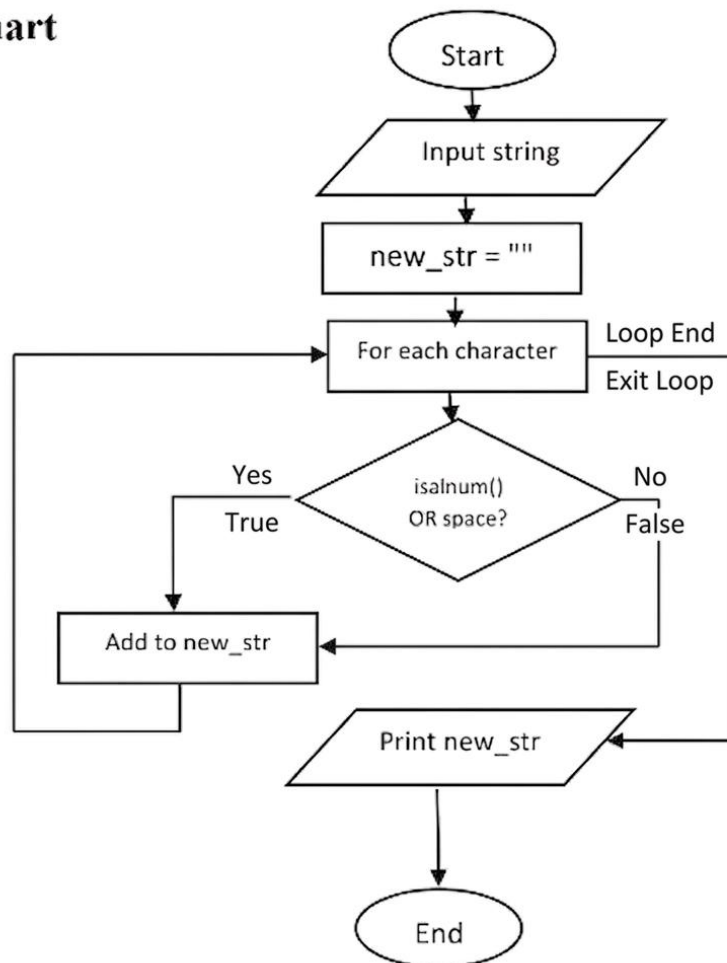

Step 4: For each character in string

Step 5: If character is alphabet/number/space → add to `new_str`

Step 6: Print `new_str`

Step 7: Stop

Flowchart

10.1.1. Remove Punctuations from a String

Write a Python program to remove all punctuation marks from a given string and print the resulting string.

Punctuation marks are special characters that are not letters, digits, or spaces.

The program should keep all letters (uppercase and lowercase), digits, and spaces, but remove all punctuation marks.

Input Format:

- Single line contains a string (may include letters, digits, spaces, and punctuation marks).

Output Format:

- Print the string after removing all punctuation marks.

Note:

- Refer to sample test cases for better understanding.

Sample Test Cases

+

removeP...
1 st=input()
2 new_str=""
3 v for ch in st:
4 v →if ch.isalnum() or ch.isspace():
5 →→new_str=new_str+ch
6 print(new_str)# Type Content here...

Average time
0.007 s
7.25 ms

Maximum time
0.014 s
14.00 ms

4 out of 4 shown test case(s) passed
4 out of 4 hidden test case(s) passed

Test case 1 8 ms
Expected output
Hello, World!
Hello World #

Test case 2 6 ms

Test case 3 6 ms

Actual output
Hello, World!
Hello World #
